                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-122-409-86

1 Sequence 86, Application US/09322409

2 Patent No. 6471957

3 Facent No. 6471957

4 PAPLICANT: Sim, Gek-Kee

APPLICANT: Yang, Shumin

APPLICANT: Sim, Gek-Kee

APPLICANT: Wonderling, Ramani S.

TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF

TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF

FILE REFERENCE: IM-2-C1

CURRENT APPLICATION NUMBER: US/09/322,409

CURRENT FILING DATE: 1999-05-28

EARLIER RPILING DATE: 1998-05-29

NUMBER OF SEQ ID NOS: 154

SOFTWARE: Patentin Ver. 2.0

Patent No. 6489461

GENERAL INFORMATION:
APPLICANT: Froman, B. & Dehesh, K.
TITLE OF INVENTION:
TITLE OF INVENTION: Involved in Patty Acid Beta-Oxidation and Methods of Use.
FILE REFERENCE: 17137/01/01/095
CURRENT APPLICATION NUMBER: US/09/591,095
CURRENT APPLICATION NUMBER: US 60/138,162
EARLIER APPLICATION NUMBER: US 60/138,162
SARLIER PILING DATE: 1999-06-08
NUMBER OF SEQ ID NOS: 27
SOFTWARE: FastSRQ for Windows Version 4.0
SEQ ID NO 4
LENGTH: 664
                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 4375, Application US/09134000C

Sequence 4375, Application US/09134000C

Patent No. 6677156

GENERAL INFORMATION: ENTERCOCCES FACALIS FOR DIAGNOSTICS AND THERAPEUTICS ITTLE OF INVENTION: ENTERCOCCUS FACALIS FOR DIAGNOSTICS AND THERAPEUTICS FILE REPRENCE: 032796-032

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT PILING DATE: 1998-08-13

Sequence 347, Application US/09949002
Sequence 347, Application US/09949002
Patent No. 6900016
Barent No. 6900016
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYNORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUNE DISEASE, METHODS OF DETECTION
TITLE OF INVENTION: AND USES THEREOF
FILE REFERENCE: CL000790
CURRENT APPLICATION NUMBER: US/09/949,002
CURRENT FILING DATE: 2000-01-28
PRIOR APPLICATION NUMBER: 60/231,401
PRIOR APPLICATION DATE: 2000-09-08
                                                                                                                                                                                                                                                                                                                                                     Sequence 16, Application US/10187790A

Patent No. 6908618

GENERAL INFORMATION:
TITLE OF INVENTION: PRODUCTION OF NOVEL BOVINE RESPIRATORY SYNCYTIAL
TITLE OF INVENTION: VIRUSES FROM CDNAS
FILE REPERENCE: 108172-00076
CURRENT APPLICATION NUMBER: US/10/187, 790A

CURRENT FILING DATE: 2002-07-03
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 557;

Sequence 309, Application US/09711164
Patent No. 6589738
GENERAL INFORMATION:
APPLICANT: FOR STAIN, R. Allyn
APPLICANT: Chest, Kari
APPLICANT: Chest, Kari
APPLICANT: Zyskind, Judith
TITLE OF INVENTION: GENES ESSENTIAL FOR MICROBIAL PROLIFERATION AND ANTISENSE THERET
FILLS REFERENCE: ELITRA.008A
CURRENT APPLICATION NUMBER: US/09/711,164
CURRENT FILLNG DATE: 2000-11-09
PRIOR PILLNG DATE: 1999-11-9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 4939, Application US/09328352

Radent No. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: BAUMANNI FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION UNMBER: US/09/328,352
CURRENT PILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 4939
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Sequences AAY58219-Y58220 represent encoded and mature canine interleukin -5 (IL-5). The invention relates to canine IL-4, canine or feline Flt-3
                                                                                                                                                                                                   The present invention provides the protein and coding sequences of the canine interleukin-5 (Li-5) protein. This can be used to treat allergies, cancer and inflammatory reactions in dogs. The present sequence is one version of the IL-5 protein shown in the specification
                                                                                                                                                 Novel canine interleukin 5 polynucleotide and polypeptides are used for generating antibodies which are useful in treating allergies in dogs.
                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease

canine IL-5, canine or feline CD40, canine or feline CD154 (CD40 ligand), canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMSEP), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including a lergies, tumours, inflammation and graft rejection, and to increase the response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while conclected fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligomucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequences AAY58219-Y58220 represent encoded and mature canine interleukin -5 (IL-5). The invention relates to canine IL-4, canine or feline Flt-3 ligand, canine or feline CD40, canine or feline CD40, canine or feline CD40 ligand).

canine IL-5, canine IL-13, feline interferon-alpha (IFN-alpha) and feline granulocyte macrophage colony-stimulating factor (GMCSF), and nucleotides which encode these immunoregulatory proteins. The proteins, their associated nucleic acids, specific antibodies and inhibitors may be used as vaccines for therapeutic or prophylactic regulation of an immune response in animals (particularly cats, dogs, horses and humans). They may be used to treat autoimmune or infectious diseases including
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding immunoregulatory proteins from cats or dogs, useful for treating or preventing e.g. tumors or autoimmune disease

        response from a co-administered antigen. The nucleotide sequences can also be used for the recombinant production of a protein, while nucleotide fragments are useful as probes, as amplification primers and as sources of inhibitory therapeutics (e.g., antisense oligonucleotides). The proteins may be used to raise antibodies and to screen for modulators of activity, while the antibodies may be used in detection, and in drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of the canine interleukin-5 (LL-5) protein. This can be used to treat allergies, cancer and inflammatory reactions in dogs. The present sequence is one version of the LL-5 protein shown in the specification

                                                                                                                                                                                mon AX
This protein sequence represents ovine interleukin-5 (IL-5). Ovine IL-5 or IL-12 are used to treat and/or prevent infections in livestock (esp. cows and sheep), particularly where the animals are stressed, e.g. during transport. IL-5 and IL-12 can also be used as adjuvants in vaccines for veterinary use (partic. weakly immunogenic subunit or synthetic peptide vaccines). They may also be used to treat cancer, immunosuperseaton and allargy, to enhance/suppress the reproductive system and to promote growth or early maturity. Optionally interleukin can be delivered from constructs or delivery cells and antibodies are useful in enzyme immunopotentiators, especially IL-5 promotes growth of early hamminopotentiators, especially IL-5 promotes growth of early themosteric progenitor cells and generation of cytotoxic cells from thymocytes, also it stimulates production and secretion of IgM and IgA (in synargism with bacterial endotoxin). IL-12 induces production of gamma-interferon by, and proliferation of, T and NK cells and increases the (nn-) specific cytolytic lymphocyte response. The genetic constructs can also be used for in vitro production of IL-5 or -12. (Updated on I7-coll-2003 to standardise OS field)

The invention relates to a tok bequence of 103551 base pairs appearing as ABX04971, or its variant, that it is not a sequence encoding all or part amino acids 1-920 encoded by mon AI cas given in the specification. The DNA is the S. cinnamonensis polyketide article antibiotic monensin biosynthetic gene cluster. Also included are a combinant cloning or expression vector comprising the gene cluster, a recombinant cloning or expression vector comprising the gene cluster, a cluster and is capable of expressing a corresponding polypeptide), a cluster (and is capable of expressing sene cluster, e.g. one which binds constitution of the same or analogous gene cluster; e.g. one which binds specifically to a region of the monensin gene cluster selected from mon CI, mon II, mon RI, mon RI, mon AIX and monensin promoter to control expression of the monensin gene cluster selected from mon CI a percison of the monensin gene cluster control expression of a heterologous gene in Streptomyces cinnamonensis, a polypeptide encoded by a portion of the monensin gene cluster (preferably comprising mon BI, mon BII, mon AIX or mon AX or their control expression of a heterologous gene in Streptomyces cinnamonensis, a polypeptide encoded by a portion of the monensin gene cluster control of control expressing mon BI, mon BII, mon AIX or mon AX or their cyclase enzyme encoded by mon CII, producing S. cinnamonensis capable of contranted levels of production of monensin comprising multiple copies cc overexpress the mon RI gene, S. cinnamonensis with DNA encoding a heterologous gene and expressing the gene under control of the concesses and materials (narranessimming the gene under control of cativater gene mon RI or actillorf4 and 13-propyl erythromycin A. The concesses and materials (narranessimming S. cinnamonensis with DNA encoding a heterologous gene and expressing the gene under control of propartides and materials enzyme systems, nucleic acids and vectors) are copyly expected. The present sequence represents a protein encoded by the pr

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the
                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the envelope gene (ABA97721) and protein (ABB08908) from pepper mild mottle virus (PMWV - a member of the Tobamovirus family of single-stranded RNA viruses). The invention also encompasses plant expression vectors which comprise the PMWV envelope gene. The present sequence represents the PMWV envelope protein

New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at seqdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Orotate-phosphoribosyl transferase, URAS gene, SCS7 gene, SEC65 gene, secretory pathway, hybridisation technique, yeast.
                                                                                                                                                                                    invention relates to a recombinant DNA construct comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 41; DB 8;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                    The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the calestor to the agent, detecting a change in expression of the gene of relative to expression of the gene in an expression vector not exposed to the agent, treating a subject. The agent comprises an antisense of the agent treating a subject with the agent comprises an antisense of oligonucleotide. The subject with the agent comprises an ammal, preferably a human. The configuration of the agent of comprises providing a polypeptide and an agent, exposing the polypeptide to the agent and identifying fat cell number or size in the subject with the agent comprises an antibody. A method of regulating fat cell subject. The agent under conditions so that fat cell size or number in the agent under conditions so that fat cell size or number in the comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the configuration of a season of a gent of compounds that cells intuence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents a city polypeptide.

                                                                                                                The present invention provides polypeptides encoding a novel orotate-phosphoribosyl transferase (URAS) gene. The invention is useful for producing and selecting yeast strains capable of stable genetic integration of heterologous sequences into a host genome. The invention is also useful for measuring expression of the SCS7 gene and secretory pathway (SEC65) gene and to further characterise the structure and function of this gene and its encoded protein. The nucleic acid fragments of the invention can also be used as probes for various hybridisation techniques. The present sequence is Yarrowia lipolytica SEC65-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18
                           polypeptides, useful for producing and selecting yeast strains capable of stable genetic integration of heterologous sequences into a host genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL361737-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more
genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                         Gaps
              New isolated orotate-phosphoribosyl transferase polynucleotides and polypeptides, useful for producing and selecting yeast strains capal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Drosophila; developmental biology; cell signalling; insecticide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to new Proteus mirabilis polypeptides and polymucleotides. The invention also relates to antibodies against the polymucleotides, methods for producing the polypeptides, method for producing the polypeptides, method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for antibalis activity. The polypeptides and applymucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial diseases, as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.
ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                         Gaps

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential genes them the discovery of movel antibiotics, the sesential genes themselves and the encoded proteins. The prokaryotes used are Escherichia themselves and the encoded proteins. The prokaryotes used are Escherichia and Strevillation of potential new targets for antibiotic useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in celectronic format directly from WINDO at the wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a recombinant DNA construct comprising a promoter functional in plants operably linked to an oil-associated gene. The construct is useful for transgenic plant seed which has in its genome the construct, that is functional in the plant to transcribe the oil-associated gene. The transgenic plant seed grows into a plant having enhanced seed oil as compared to wild type. The construct is useful for producing hybrid maize seed. The transgenic plant seed is useful for producing vegetable oil. The present sequence represents the amino acid sequence of an oil-associated gene related protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel recombinant DNA construct comprising a promoter functional in plants operably linked to an oil-associated gene for producing transgenic plant seed.

the interior of the comprision of a cell. Also included are:

(1) a vector comprising a promiter proliferation of a cell. Also included are:

(1) a vector comprising a promiter operably linked to the nucleic acid

c encoding a polypeptide whose expression is inhibited by the antisense

c nucleic acid; (2) a host cell containing the vector; (3) an isolated

c nucleic acid; (2) a host cell containing the vector; (3) an isolated

contisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide or its fragment whose expression is inhibited by the

c antisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide or its fragment whose expression is inhibiting callular

c proliferation or the activity of a gene in an operon required for

proliferation or that has an activity against a biological pathway or the gene product or that has an activity against a biological pathway or equired for cellular proliferation; (8)

c dentifying a gene required for cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a

c compound's activity; (11) a computably strains in which the gene

c product is overexpressed or underexpressed; (12) determining the extent

c product is overexpressed or underexpressed; (12) determining the extent

c product is overexpressed or underexpressed; (12) determining the confileration of an organism. The antisense nucleic acids are useful for dentifying proteins or screening for homologous nucleic acids required for cellular proliferation to sendidate molecules for rational and antisense molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the trarget prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid comprising any one of
  Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                     Zyskind JW;
Xu HH;
                                                                                                                                                                                                                                                                                                                                                                                                                  Haselbeck R, Ohlsen KL,
Yamamoto R, Forsyth RA,

The invention relates to a recombinant DNA construct comprising a prowide for expression of a polynuclectide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a cransformed plant having an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant comprising an improved property comprises transforming a plant with the avoing an improved property comprises transforming a plant with the recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with the improved plant properties, e.g. improved cold, heat or drought tolerance, colerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at seqdata.uspto.gov/sequence.html.

ABM15762 to ABM27252 encode the human ORFX in the specification). ABM15762 to ABM27252 encode the human ORFX proteins given in ABP00010 to ABP1500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a syndrome associated with ORFX-associated disorder. ORFX polymucleotide cs sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, conferential, neurodegenerative disorders, cirrhosis of liver, conferential, neurodegenerative disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic storage disease, various immune disorders disorders, infectious diseases, autofumune thyroidtis, myasthenia gravis, graft-versus-host disease, autofumune thyroidtis, myasthenia gravis, graft-versus-host disease, autofumune thirammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut creperfusion injury in various tissues and conditions resulting from systemic cytokine damage. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic

the inversion relaters to an isolated nuclear acts compileration where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

of the nucleic acid inhibits proliferation of a cell. Also included are:

of the nucleic acid inhibits proliferation of a cell. Also included are:

of the nucleic acid inhibits proliferation of a cell. Also included are:

contocing a polypeptide whose expression is inhibited by the antisense contest acid; (2) a host cell containing the vector; (3) an isolated or its fragment whose expression is inhibited by the antisense conting the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway or required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a substantially purified nucleic acid molecule encoding a nitrite reductase of SEQ ID NO. 11926. Further disclosed is a recombinant DNA construct for expression of a nitrite reductase gene in a plant cell, and a plant cell comprising the recombinant DNA construct. The nucleic acid is useful for determining gene expression, identifying mutations in a gene of interest, and for constructing mutations in a gene of interest. Sequences given in records for SEQ IDS 9692-16825 represent a group of 7134 Mxyococcus xanthus proteins and peptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO
          proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
strains; or (13) identifying the target of a compound that inhibits the

The invention also relates to a recombinant expression vector comprising a polynucleotide operably linked to a transcription regulatory element, a cell comprising a recombinant vector, a method for producing an E. faecalis polypeptide, an isolated nucleic acid comprising a sequence not given in the specification, a recombinant vector. The polynucleotides can be used to detect the presence of E. faecalis in a sample. The sequences are useful for preparing a composition for represents an E. faecalis polypeptide of the invention. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide, useful for preparing a composition for diagnosing or treating B. fecalis infection.

The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a correctal infection, for evaluating a compound, such as a polypeptide, of for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for the data
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Escherichia coli; B2/D+A-; antiinflammatory; antibacterial; immunosuppressive; extra-intestinal infection; phylogeny; meningitis; systemic infection; non-diarrhoeal infection; septicaemia; pyelonephritis; antibiotic resistance.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Arabidopsis thaliana. ACOX enzymes catalyzes the initial step of fatty acid beta-oxidation. The invention provides ACOX and 3-ketoacyl-CoA hiblase (thiolase (thiolase thousand the acquences (see AAA89273-85) and encoded polyapptides (see AAB1999-B20011), and methods of producing such polyapptides using recombinent methods in host (bacterial, insect, mammalian and especially plant) cells. Expression of ACOX and/or thiolase in a plant can be increased or suppressed using nucleic acid constructs in sense or antisense orientation. This provides a means of manipulating the content and composition of fatty acids and compounds containing such fatty acids, such as oils, waxes, fats and storage proteins. Suppression of ACOX and/or thiolase expression also provides a means of inhibiting or postponing seed germination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polynucleotide encoding proteins involved in fatty acid beta-oxidation, useful for modifying oil or lipid composition in host plant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of AtAXC1, an acyl-CoA oxidase (ACOX) of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bacterial infection; Pseudomonas aeruginosa infection; antibacterial.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                The invention relates to a library of DNA fragments of Escherichia colistrains comprising polynucleotides (ABA88577-ABA80729 and ABA89533) and encoded proteins (ABB2549-ABB52094-ABB52994-ABB52994) of nature B2/D+A. The polynucleotides have potential antinflammatcry, antibacterial and immunosuppressive activity as part of pharmaccutical composations used to treat, palliate or prevent extra-intestinal E. colinfections. The polypeptides are useful for determining the phylogenic group of a given E. coli strain. These polypeptides can detect and treat an undesired development of E. coli, particularly an extra-intestinal frection that include systemic and non-diarrhoeal infections such as septicaemia, pyelonephritis and meningitis this is particularly advantageous as bacterial resistance is increasing with the more frequent use of broad spectrum antibiotics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                        A library of DNA fragments of Escherichia coli strains for the phylogenic determination of a given strain comprises polynucleotides of nature B2/D+
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacterial infection; Pseudomonas aeruginosa infection; antibacterial.

The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therapy of pethological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, or the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant or production of P. aeruginosa derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequence ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but, was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ğ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Delivery mechanism; cell transduction; cancer; Alzheimers disease; Parkinsons disease; hypercholesterolemia; cystic fibrosis; anemia; diabetes; arthritis; autoimmune disease; poliodystrophia cerebri progressiva infantilis; HIV protein transduction domain; cytostatic; neuroprotective; nootropic; antiparkinsonian; antilipemic; CNS-Gen.; respiratory-gen.; antianemic; antidiabetic; antianthritic; immunosuppressive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Composition for packaging polynucleotide, comprises recombinant polynucleotide-packaging polypeptide having high mobility group (HMG) domains and protein transduction domain operably linked to organelle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

CC bolynucleotide-packaging polypeptide comprising high mobility group (HMG) box domains and a protein transduction domain operably linked to a cargeting signal for directing the recombinant polymoleotide-packaging polypeptide to an intracellular organelle, where the polypeptide and general polymoleotide for delivery to the targeted organelle. The invention also relates to a recombinant high mobility protein or its fragment comprising a protein transduction domain operably linked to a targeting signal for a non-nuclear organelle, where the recombinant high mobility protein associates with a polymoleotide under low stringency conditions and packages the polymoleotide for delivery to the non-conditions and packages the polymoleotide for delivery to the non-conditions and packages the polymoleotide for delivery to the non-combining a polymoleotide with an amount of a recombinant polypeptide combining a polymoleotide with an amount of a recombinant polypeptide sufficient to package the polymoleotide, where the recombinant contransduction domain operably linked to an organelle targeting signal, a method of treating a polymoleotide to an organelle of a cell and a method of treating a polymoleotide to an organelle of a cell and a method of treating a polymoleotide to an organelle of a cell and a fective to package a polymoleotide encoding at least one of the host's cells with a compositions are useful for treating gene related diseases or disorders chosen from cancer, Alrheimers diseases, beta composition are useful for treating gene related diseases, or hypercholesterolemia, cystic fibrosis, anemia, diabetes, arthritis and a utochommune diseases, and for treating diseases caused by mitochondrial composition and for treating diseases caused by mitochondrial composition signal used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder, cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune disorder; infectious disease; autoimmune disorder; infectious disease; autoimmune disorder; infectious disease;

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABN15762 to ABN27252 encode the human ORFX proteins given in ABP0010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder. In humans, and in the manufacture of a medicament for treating a gathology associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders in hemomerable to organ cransplantation, cardiovascular diseases, disorders related to organ cransplantation, cardiovascular diseases, disorders related to organ cransplantation, cardiovascular diseases, disorders related to organ cransplantation, cardiovascular diseases, disorders infectious grange disease, various immune deficiencies and disorders, infectious carbinitis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune disorders such as multiple sclerosis, rheumatoid arbinitis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host consection or regeneration and treatment of lung or liver fibrosis, protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from systemic cytokine damage. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bosinophil differentiation factor - with eosinophil differentiation activity and B cell growth promoting activity of B cell growth factor II.
          The present sequence represents a truncated T cell replacing factor (full length given in AMM72947) having B cell growth factor activity. A method has been developed for the preparation of B cell differentiation activating factor (also designated BCGF, B cell growth factor, T cell replacing factor and TRF). The method comprises producing a protein by culturing a transformed cell introduced by a plasmid containing a DNA coding B cell differentiation activating factor. The method is used for the large scale preparation of B cell differentiating factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The BDF gene product is a novel interleukin, useful in the study of haemopoiesis and B-cell differentiation, and may have utility in MAb production. It may be used therapuetically in regulation of the immune response, and promotion of ecsinophilia. See also AAN71243. (Updated on

                                                                                                                                                                                                                                                            The present sequence is that of an N-terminally truncated form of a protein designated T cell replacing factor (TCR) which has B cell growth factor (BGGP II) activity. The truncated protein, deleted up to and including amino acid residue Ala18, can be used, in common with the full-length protein for prevention, diagnosis and treatment of infectious diseases, autoimmune diseases and certain cancers. (Updated on 25-MAR-2003 to correct PF field.)
